1 Supportive Care Suffices for Most Children With COVID-19, New Guidance Suggests

Supportive care is sufficient to treat the majority of children with COVID-19, since most will be only mildly ill, an expert pediatric infectious diseases panel advises.

“For the small fraction of children ill enough to require hospitalization and supplemental oxygen, use of remdesivir is suggested given adult data demonstrating a shortened time to clinical recovery with therapy,” Dr. Kathleen Chiotos of the Roberts Center for Pediatric Research in Philadelphia told Reuters Health by email.

2 Viral presence and immunopathology in patients with lethal COVID-19: a prospective autopsy cohort study

Background

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) targets multiple organs and causes severe coagulopathy. Histopathological organ changes might not only be attributable to a direct virus-induced effect, but also the immune response. The aims of this study were to assess the duration of viral presence, identify the extent of inflammatory response, and investigate the underlying cause of coagulopathy.

Interpretation

In patients with lethal COVID-19, an extensive systemic inflammatory response was present, with a continued presence of neutrophils and NETs. However, SARS-CoV-2-infected cells were only sporadically present at late stages of COVID-19. This suggests a maladaptive immune response and substantiates the evidence for immunomodulation as a target in the treatment of severe COVID-19.

3 Flu, COVID-19 or Both? Don't Overlook Co-Infection, CDC Urges

When a patient presents with acute respiratory symptoms this fall, clinicians should consider three options: influenza, COVID-19, or co-infection, CDC experts said.

And given the likelihood that influenza and SARS-CoV-2 will be co-circulating in the community, clinicians should pay special attention to local surveillance data about each virus.

4 A Visual Guide to Face Masks: What Works, What Doesn't

Courtesy: Medscape. Author: John Watson Read the full article.

<https://www.medscape.com/slideshow/facemask-visual-guide-6013216>

A Clear Improvement?

Although covering the mouth and nose can have a dramatic public health impact, there is a notable downside. Blocking the mouth can create challenges for deaf or hearing-impaired persons who rely on lip reading, and can impede language development of infants and young children. Some hope is offered by the recent FDA clearance of a fully transparent, surgical-grade face mask (Clear Mask). Although the mask has obvious utility during this pandemic, its development began 3 years ago after the company's deaf co-founder experienced considerable difficulty understanding masked surgeons during a procedure.

Masks for Children

The CDC recommends that children younger than 2 years should not wear masks due to the risk for suffocation. Like the CDC, the American Academy of Pediatrics (AAP) endorses the use of cloth masks for all children older than 2 years, "including the vast majority of children with underlying health conditions, with rare exception." The AAP's parenting website HealthyChildren.org features a guide for addressing common misconceptions about children and cloth masks. Parents will be seeking guidance on the best-fitting, most comfortable masks for their children as many begin returning to in-person school.

Face Shields

Because it's possible to contract COVID-19 through the mucous membranes of the eye, face shields provide superior protection against splash and spray of respiratory secretions for HCWs in certain settings. A recent study found that the COVID-19 infection rate dropped from 19% to 0% when HCWs were given face shields made of polyethylene terephthalate (250-µm thickness) in addition to three-layer surgical masks and other personal protective equipment.

While the CDC does not recommend the use of face shields as a replacement for face masks, as it is currently unclear whether they reduce viral spread, their value is evident as a supplemental piece of equipment. The CDC recommends that, at a minimum, face shields should be hooded, wrap around the sides of the wearer's face, and extend below the chin. Reusable face shields should be cleaned and disinfected after each use.

filtering facepiece respirator, more commonly known as N95, N97, N99, or N100 masks. The number designation refers to the percentage of particles the masks can filter (ie, N95 masks filter 95% or more). Unlike surgical masks, these masks also filter smaller 0.075 µm solid particles. N95 masks are tested and certified by the National Institute for Occupational Safety and Health. They come in different sizes, and in healthcare settings they must be fit-tested to ensure efficacy

Although a 2019 study found no significant difference between surgical and N95 masks in reducing the rate of laboratory-confirmed influenza among HCWs, other studies have shown the N95 masks to be superior in terms of reducing aerosol exposure and viral transmission. Given recent supply shortages and price gouging, it's reassuring that N95 masks past their expiration dates still retain their filtration efficiency after sterilization with ethylene oxide and hydrogen peroxide.

But the efficacy comes at a cost. N95 masks were described as "suffocating, uncomfortable, and difficult to tolerate for long durations" in a recent JAMA commentary, and prolonged wearing can result in facial bruising and abrasions.

Enhancing Cloth Masks' Efficacy

Mask efficiency is increased with more layers of fabric. Although one layer may reduce droplets emitted during speaking, two layers are required to impede those produced by coughing and sneezing. The World Health Organization (WHO) recommends that cloth masks have

Filtering Facepiece Respirators

The most effective mask option for HCWs is the

three layers to effectively separate the mouth from the outside environment, a design that has been shown to block droplets at a rate similar to those of surgical masks. Improving the fit of a cloth mask by adding a nylon overlayer also can enhance its ability to filter out particles.

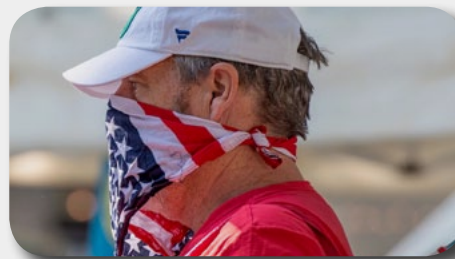

Researchers have calculated the filter quality of various cloth mask materials. Weighing filtration efficiency and overall breathability, they concluded that a mask made of the nonwoven polymer polypropylene offers the highest filter quality. WHO provides a useful overview of the efficacy and breathability of nonmedical mask materials. Additional data show that filtration efficiency can be increased by using hybrid fabrics and higher-weave cotton.

Masks with Exhalation Valves or Vents

Unlike the masks worn mainly to prevent the wearer from spreading disease, masks with exhalation valves or vents are designed to protect only the wearer. These masks are often used by industrial laborers, who breathe in filtered air through the outside fabric portion of the mask and exhale through the valve, minimizing their exposure to chemicals, particulates, and other adverse elements. The design feature that allows wearers to exhale renders such masks effectively useless, given that the one-way valves or vents can expel viral droplets, promoting transmission to others. In August, the CDC issued a warning against their use, and since then, bans have been issued by commercial air carriers, hospitals (such as the Mayo Clinic), & major US cities.

Bandanas

The same Duke University study had similarly discouraging news for those who favor bandanas as substitutes for masks. Bandanas were effective at reducing droplets by only a factor of two, the second worst finding of the 14 masks tested. Bandanas are better than nothing, however, and their ability to block virus-laden droplets can be improved by ensuring that they fit properly.

Cloth Masks

Cloth face masks, whether homemade or purchased, have become a defining image of the pandemic. SARS-CoV-2 is thought to live on cloth for up to 2 days but can be easily killed using standard disinfection methods. The ability to wash and reuse cloth masks is a key advantage, which may offset the adverse environmental effects of disposable masks. Unique cloth masks may also be a form of personal expression that fosters their acceptance.

The effectiveness of cloth masks is less clear. Although comfort is a key driver of adherence, increased breathability negatively correlates with the ability to block droplet transmission. Cloth masks offer moderate efficacy at preventing the dissemination of particles the same size or smaller than those of SARS-CoV-2.

Brief Report of Adolescon

I take my privilege as the secretary of IAP West Delhi branch to convey the success and universal appreciation of e-Adolescon 2020, a Digital National Conference on Adolescent Medicine, organized by IAP West Delhi with AHA Delhi State and supported by Central IAP on dIAP platform from 26th & 27th Sep 2020.

We are proud to have had excellent talks by renowned national experts in the field of Adolescent care. We saw very enthusiastic participation from all over India by having an audience of around 500.

Topics selected were very informative and practically useful for general Pediatricians covering physical health issues and psychological issues particularly burning contemporary problems like depression and substance abuse. Talks on Parenting and counselling were appreciated by one and all.

As the Organizing Chairperson of the conference, I convey my thanks to Dr Deepak Gautam, Organizing Secretary, IAP West Delhi, Delhi IAP with all city branches for their support.

We also had a wonderful talk on the quality of probiotics and their comparative study analysis, by the original researcher

Dr Dhanashekhar from Chennai on 30th Sep 2020

Brief Report of Daughters Day celebrations *Daughters Are Strength of The Nation!*

अक्षम, अवाभिमान, विद्वान; बेटियों की नई पहचान,
मिल कर करे आह्वान; हर बेटे भरे उड़ान

International Daughter's Day is celebrated on 4th Saturday of September, every year. It commenced in India and was adopted internationally. In many parts of India, the birth of a girl child is not welcomed. It manifested as female feticide and infanticide and altered the male female ratio. It is now open facts that a literate and economically independent woman can change the scenario. Girl education (Beti Padho-Beti Bachao) remains the primary social goal to address the gender discrimination and therefore, 'Daughter's Day' was celebrated on the school platform and 47 schools participated in the program.

Vedic India had a relatively liberal society, which gave freedom to both men and women, for having education and to pursue the occupation. However, slowly woman lost its position in the society. Now with the improving literacy and new vision, women of India are again striving for glorious position for themselves.

IAP Delhi state collaborated with **SDP School Pitampura**, Delhi and **ASGS "Dream Big"** welfare society to celebrate 'Daughter's Day' program on 2nd of October 2020, on the zoom/Facebook platform; 47 schools and about 2000 audience participated in the program. **Chief Guest** of program was **Honorable Member of Parliament, Mathura Constituency, Padmashri, Ms. Hema Malini** and **Guest of Honor** was **Co-founder of Bachpan Bachao Andolan, founder of Balashram Ms. Sumedha Kailash Satyarthi**. Mrs India International elegance, tourism 2019, Mrs Surabhi Tiwari was the special Guest of the occasion. Special tribute was given to first combat pilot, flight Lieutenant Avani Chaturvedi. She sent an inspiring message for the young students. Program started with a small movie –'Daughter's with the Wings'. Ms. Sumedha Satyarthi participated the program, through a recorded video. Ms. Lalita, a child warrior (Bal Mitra) was a special guest who has been groomed with the help of Satyarthi foundation.

Padmashri Ms. Hema Malini was cheered by one and all as she recited a beautiful poem; she answered many questions raised by the children of various schools. Children contributed by performing various program like, dance, speech etc.

An issue-based panel discussion was also organized with the eminent panelists- **Dr Geetanjali Kumar**, psychologist, Child counselor, **Dr Rajiv Seth**, pediatrician, Medical Director, Child Health & Development Center, New Delhi; **Ms. Yogmaya Agnihotri**, Supreme court Lawyer; **Ms. Surabhi Tiwari**, Mrs India International Elegance & Tourism 2019;

Ms. Surabhi Tiwari declared the name of winners of various competitions.

A booklet on health issues of adolescent girls was released on the occasion by the chief guest. Author of the book is **Dr Nirupama Tyagi**.

Program was attended by all office bearers of Delhi IAP State & Presidents & Secretaries of all city branches (**Dr R K Alwadi**, President, IAP Central Delhi, **Dr Swati Bhardwaj**, Secretary, IAP Central Delhi, **Dr Piyush Jain**, President, IAP East Delhi, **Dr Nirupama Tyagi**, Secretary, IAP East Delhi, **Dr Dinesh Mittal**, President, IAP North Delhi, **Dr Shalini Goel**, Secretary, IAP North Delhi, **Dr Praveen Khilnani**, President, IAP South Delhi, **Dr Manu Agarwal**, Secretary, IAP South Delhi, **Dr Manish Chopra**, President, IAP West Delhi, **Dr Prashant Seth**, Secretary, IAP West Delhi), and Executive Members (**Dr Shikha Mahajan**, **Dr Amit Kumar Tyagi**, **Dr Dinesh Sahai**, **Dr Piyush Jain**, **Dr Pankaj Garg**, **Dr Dinesh Mittal**, **Dr Ashok Chakravarty**, **Dr Shyam Sundar Mina**, **Dr Sharwan Gupta**, **Dr Peeyush Khanna**) and Co-opted Members (**Dr L N Taneja**, **Dr Tapisha Gupta**, **Dr Puneet Dhawan**, **Dr Rajeev Gupta**, **Dr Anurag Agarwal**, **Dr Vipul Jain**, **Dr Deepak Gautam**, **Dr Deepak Gupta**, **Dr R K Nabh** President Delhi, **Dr Smita Mishra** Convener, Secretary, **Ms. Anita Sharma** Principal of SD Public school Pitampura & member of NCERT conducted the program efficiently. **Honorable President Dr Bakul Parekh**, President Elect. **Dr Piyush Gupta**, Secretary General **Dr Basav Raja**, addressed the audience. **Dr RK Nabh** introduced **Mr. Chanderbhan** Chairman of SDP school and **Mr. Suraj Gupta** Manager of the school and CIAP members (CIAP President-Elect (2020) **Dr Piyush Gupta**, CIAP Vice-President, **Dr A S Vasudev**, CIAP Liaison-Jt.
